Adobe also attempted to make Lightroom more similar to the Photos app on iOS (not counting Apple's own Photos UI). This is evident in the fact that you can now access your latest edited image right from the camera roll. There are other new features, such as the ability to complete a number of edits in Lightroom before starting the Import dialog. There is also a tool for retouching your images, and you can also now add artistic effects. The latter two are executed in the Photoshop-styled CS6 tab, but some of the tools, including the Remove Noise filter, are actually borrowed from Photoshop. There is also a minimap button that will direct you to whichever panel you want to open, and while I appreciate these changes, they are not that common with the edges of a photo, and that is where the familiar toolset is most important. Adobe also reformatted the interface to take into account the faster new iPad pro. I am not sure that the interface is even faster than before, but the larger screen for touch gestures works much better. It is also easier to see more of the image being worked on at any given time. Only on the iPad Pro can you zoom in infinitely to see the farthest edges of a picture. And yes, you can zoom out to get a good perspective of the image. I suppose it's also on the iPad Pro that you can now manually and easily control the image's RAW capture settings. In fact, Adobe's own product can and does shine in one area: in a pinch, it can emulate Photoshop's Layer Masks, which is a feature that can make a picture look like it was photographed in a studio. It might also be the only RAW converter that gives you the ability to work with layer masks as a standalone tool, independent of Photoshop itself. If Lightroom doesn't offer layer masks, maybe Photoshop does. There is also a new Mode view that shows the best quality photo adjustments and fairly easy-to-use presets. With the powerful new Lightroom CC, you can also connect a device's mobile storage to the Lightroom catalogue without having to use a PC, such as the iPad Pro. This comes in handy for people who travel with their iPad Pro and similar devices and still want to access their previous acquisitions.

In the 'Blending Options' in the 'Effects' section, select the check marks in the top left hand corner to change the settings. The options will now become editable, and they will be greyed out with a plus icon, but with it active. Completely go to the 'Options' tab and scroll down to the 'Options' section of the menu. From here you can change the settings for all of the effects that you want to use, such as frame, blend, or add noise to the overall image. When you go to the 'Filters' section and select the number of times you want to apply the filter to the image, this will change the amount of times you have to apply the filter. Typically you would only need one or two instances. (If you are using multiple filters, such as a grain filter, multiply filter, or brightness for example, you will need to do three or four instances to get the desired grain, be it color, or black and white.) Once you have changed the settings you would like to apply, click the 'OK' button to save your changes.
