Cracking Adobe Photoshop is more involved than installing it. You will first need to obtain a cracked version of the software from a trusted source. So, all in all, I am satisfied with how Lightroom Refresh 6 is shaping up. However, it will take time for the software to gain the popularity and market share that Adobe Photoshop has accrued over the years. I am sure that despite the lack of support, Lightroom 6 is already growing more popular than its predecessor. The emphasis on speed lies in the flexibility of available tools. For example, you can now do some advanced image "healing" with the updated Spot Removal tool and remove objects that are more complex than simple dots. Updating Photoshop is not a straightforward procedure, nor is it necessary. Perhaps they should just keep on doing what they're doing and improving it, rather than force users to update their entire workflow, which means installing a whole bunch of plugins. You will definitely have to manage your camera import and export settings if you use Camera RAW to work with your imported images. Lightroom's now allow you to optimize the workflow and manage settings on the fly. You will have to make a choice between making Lightroom work with Camera RAW how you would like it to, or simply using Photoshop for the job. In any case, you will be missing out on Lightroom's core workflow features. The same with the spot removal and selection mode tools, which are just not as versatile as Photoshop's. And let's face it, I am still a photo editor, who uses a separate program for processing RAWs. Sure, the spot removal tool is awesome. But should I trust the software to do my further tuning for me? I would not bother going through the hassle, as I can do that quite easily on my computer after the shoot. To put it simply, Lightroom does exactly what is suited best for my needs - what photographers today are not only looking for but also expected to find. And that's probably why Adobe kept in that area of the application.
